line 15:

A2
The base member 17 has a number of upstanding bosses 19 defining respective bores 20 some of which are indicated in Figure 6 and Figure 7. Each boss 19 supports a respective key 21 of the keyboard 5 which has, on its underside, a depending spigot (not shown) which is received within the cruciform shaped bore 20. The construction of the keyboard can have a variety of forms but in the preferred arrangement is in accordance with the key assembly described and claimed in our co-pending patent application of even date entitled "Key Assembly" and claiming priority from British Patent Application No. 95195574.

line 23:

A3
The operation of the leaves can be seen most easily by comparing Figures 3, 4 and 5. Thus, initially the casing is in its closed position as shown in Figure 3 in which the leaf 1 rests on the base 6 with the leaf 3 retracted. The user then grasps the free end of the leaf 1 and raises it as shown in Figure 4. This movement is against the resilience of the torsion spring 8 which tends to urge the leaf 1 towards its closed position at this stage. As the leaf 1 is raised, it will pivot about the hooks 11 so that the leaf 3 is slid forwardly along the base 6. At the same time, the torsion spring 8 rotates about its longitudinal axis. Further opening movement of the leaf 1 pushes the leaf 3 further forward until a rear surface 24 of the leaf 1 engages parts of the torsion spring arms 9, 10 and further movement is prevented. The position of the leaves 1, 3 is then as shown in Figures 1 and 5.
